SBS SERIES

Steam

SBW SERIES

Hot Water

HEATING SYSTEMS

SBS Indoor Steam Heating System

- Space Heating
- Make-Up Air
- Heating and Ventilating
- Cooling

A MODEL FOR EVERY APPLICATION

AIR DELIVERIES FROM 1,000 TO 92,000 SCFM

Heat Output to Match Requirements

FEATURES

Engineered For Easy Selection And Proper Operation

All Operating And Safety Controls For System Selected

Factory Assembled And Wired Except For Piping Manifold

Single Source Responsibility

Rooftop Models With or Without Curbs

Indoor Models Platform or Suspended

Direct Expansion, Chill Water Coils, and Evaporative Cooling Available

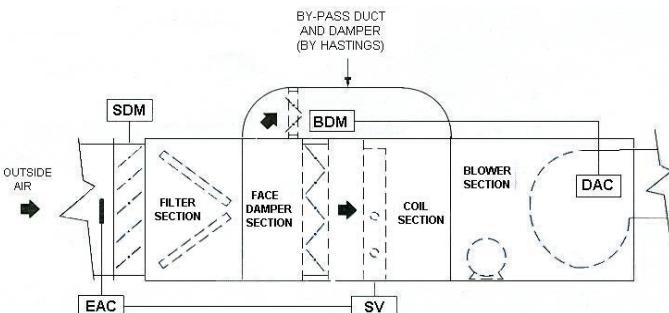

ETL Label Available

STEAM "SBS" AND HOT WATER "SBW" SYSTEMS

The Hastings' SBS and SBW Series feature the package concept in steam and hot water heating systems. Either steam or hot water coils are incorporated into a factory assembled, wired and tested heating system. Six temperature control sequences are available to meet the requirements of most heating applications. In addition to the control components and dampers illustrated below, all models include motor and starter, filter section, freezestat(s) and remote control station with operating switches and indicating lights.

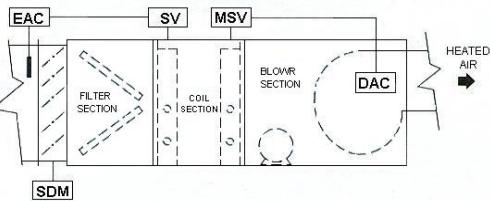

M – MAKE-UP AIR (100% OUTSIDE AIR)

The M-Make-up Air unit is designed to replace exhausted building air with 100% outside air to prevent the many problems of "air starvation". This replacement air is heated when the outside air is below the desired space air temperature conditions.

Model MA

Single coil having modulating discharge air temperature control of modulating face and by-pass damper, two position valve with mild weather air temperature lockout and inlet air shut-off damper

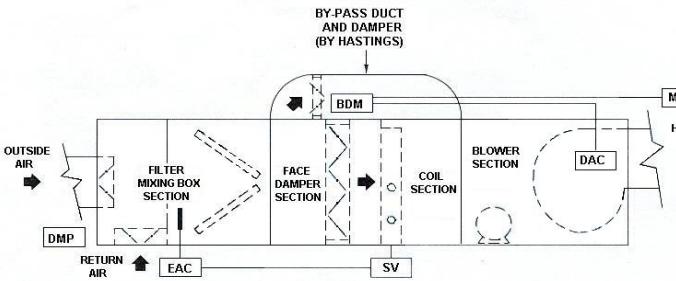

Model MB

Double coil having inlet air temperature control of pre-heat coil with two position valve, modulating discharge air temperature control of downstream coil with modulating valve and inlet air shut-off damper.

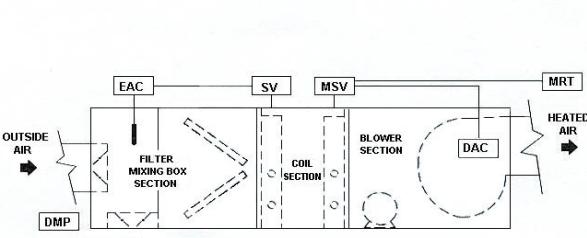

V – HEATING & VENTILATING (MIXED OR 100% OUTSIDE AIR)

The V-Heating & Ventilating unit combines the control of both make-up air and space air temperature. This sequence is equally effective for up to 100% of either outside or return air heating and ventilating applications, or 100% outside air only.

Model VA

Single coil having modulating space air temperature and over-riding discharge air temperature control of face and by-pass damper, two position valve with mild weather air temperature lockout and mixed air dampers with manual potentiometer. Inlet air shut-off damper replaces mixing dampers with 100% outside air applications.

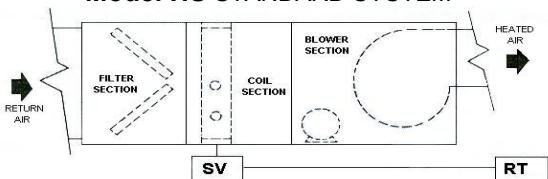

Model VB

Double coil having inlet air temperature control of preheat coil with two position valve, modulating space air temperature and over-riding discharge air temperature control of downstream coil with modulating valve and mixed air dampers with manual potentiometer. Inlet air shut-off damper replaces mixing dampers with 100% outside air applications.

H – SPACE HEATING (100% RETURN AIR)

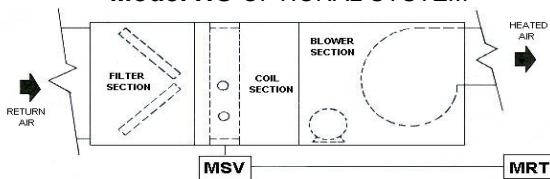

The H-Space Heating unit is designed for 100% return air space heating applications with the air temperature being controlled from the heated space. Not recommended for ventilating applications.

Model HS STANDARD SYSTEM

Two position space thermostat control with two position valve and choice of constant or intermittent fan operation.

Model HO OPTIONAL SYSTEM

Modulating space thermostat control with modulating valve and constant fan operation.

SV – “On-Off” Steam Valve w/Motor
MSV – Modulating Steam Valve w/Motor
RT – “On-Off” Room Thermostat
MRT – Modulating Room Thermostat
DAC – Discharge Air Temperature Controller

Note: Symbols shown for steam systems. Same controls used for hot water systems.

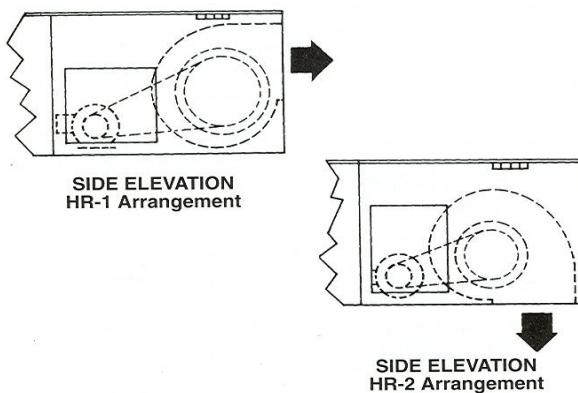

LEGEND

EAC – Entering Air Temperature Controller (Mild Weather Lockout, MA & VA Systems)
BDM – Face & By-pass Damper Motor
SDM – Inlet Air Shut-off Damper Motor
DMP – Damper Motor w/Manual Potentiometer

STANDARD EQUIPMENT (All Models)

General:

Either of two horizontal blower arrangements are available as standard: HR-1, horizontal discharge and HR-2, down discharge, as illustrated below. HR-3 horizontal up-blast available.

Cabinet:

Bolted construction of aluminized steel; SB-112/115 of 18 gauge, SB-215/218 of 16 gauge, SB-222/227/233 with 16/14 gauge side and 14 gauge top, and SB-240 with 14 gauge cabinet. Access panels are provided to allow easy access to motors, drivers and filters (if ordered). Outside surface is primed with zinc-chromate and finished with a coat of enamel. Cabinet interior insulated with 1"-2# density foil face insulation.

Blower:

Centrifugal forward curved, double width, double inlet, class 1 fan(s) with solid turned ground shaft and self-aligning, greaseable 200,000 hour fan bearings. All blower wheels are statically and dynamically balanced.

Blower housings, bearings and adjustable motor base are mounted on a reinforced frame to insure rigidity and quiet operation. Adjustable drives are standard through 10 HP, fixed drives with 15 HP and larger motors. V-belt drives are sized for 135% of motor horsepower.

SB-240 will have twin fan set with center coupling – Backward Incline fans standard.

Fan motors and drives are mounted within the blower cabinet. This affords motor protection and eliminates the operation hazard of V-belt drives external to the unit.

Filters:

Filter section with "V" or "Z" frames. (Filter optional)

Motor:

Premium energy efficient T-frame, open drip-proof, 1800 RPM pre-lubricated ball bearing type for all standard voltages.

Electric Controls:

- Motor Starter.
- Control transformer.
- Freezesstat(s).
- NEMA 1 master control panel.
- Remote control station with system switches and indicating lights.
- All controls, dampers and motors as shown with each system sequence on pages 2 and 3 of this bulletin.

Note

Valves, valve motors and linkage, room thermostats, potentiometers and remote control stations are shipped for field piping and/or mounting and wiring.

Coils:

Fabricated of heavy gauge copper tubes, staggered on 1 1/2" centers, mechanically bonded to energy efficient plate type aluminum fins. Headers are constructed of heavy seamless copper tubing and coil casings of double flanged galvanized steel. All coils tested leak free at 315 PSIG air pressure under water. Steam systems furnished with steam distributing coils having free floating cores and pitched in casing to ensure condensate drainage.

MODEL DESIGNATION

SB X-XXX-X-XX

Heating System:

S – Steam
W – Hot Water

SB Blower Model:

112
thru
240

Air Volume:

SCFM/1000

Control System:

HS or HO – Space Heating
MA or MB – Make up Air
VA or VB – Heating & Ventilating

OPTIONS AND ACCESSORIES

General:

Horizontal unit blower arrangements – horizontal upflow (HR-3) available.

Vertical unit blower arrangements – three Vertical Up and three Vertical Down as illustrated below.

Components:

Weatherproof unit – for outdoor installations with insulated blower section and unit controls mounted in NEMA 3R enclosure.

Insulated coil section – available on all units.

Inlet air shut-off damper – replaces mixing dampers for 100% outside air applications on VA or VB sequences. Low leakage dampers are also available.

Stormproof weatherhood – with rainshield and birdscreen. Installed on air intake of horizontal weatherproof units. Not available with optional vertical blower arrangements.

Birdscreen – for installation on the air intake of units with optional vertical blower arrangements.

Filter section – with 2" cleanable, 2" throwaway or 2" extended surface filters. Filter section can also be insulated.

Discharge air louvers – adjustable horizontal or vertical bladed louvers are available for mounting on the blower outlet. These louvers can be combined for double deflection air control.

Service platform – with guardrail per OSHA standard. Service platforms are available for indoor horizontal units only.

Cooling Sections – Direct expansion, chill water evaporative cooler.

Vibration isolators – either "rubber-in-shear" or "spring type" for floor mounting, roof mounting, or indoor suspension.

Vibration isolators are shipped unmounted. Internal fan/motor isolation is also available.

Extended grease lines – for remote greasing of fan bearings from control side of unit.

Variable pitch sheave – for motors 15 HP and larger. Variable pitch sheaves are standard for motors 10 HP and smaller.

Motors:

Totally enclosed, two speed (10 HP and below) explosion proof and chemical duty motors are available on all units.

For two speed applications – 15 HP and above, - a field provided and installed variable speed drive is required. Furnished by others.

Coils:

- High pressure steam coils with cupro-nickel tubes.
- Copper fins.

Electric Controls:

- Clogged filter switch with indicating light.
- Automatic mixed air temperature controller.
- Low outlet temperature shut-off.
- Fused disconnect switch (dead front type) or circuit breaker mounted in cover of main control box.

Roof Curbs:

Adapter frames and roof curbs available for horizontal units. Curbs are shipped knocked down.

Miscellaneous:

Motor and controls can be mounted on opposite side.

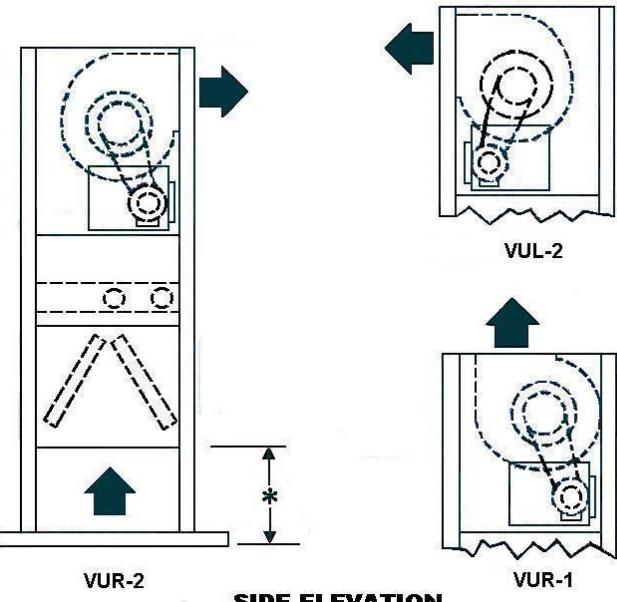

Matching cooling coil and evaporative cooling sections available for all models.

VERTICAL UNIT BLOWER DISCHARGE ARRANGEMENTS

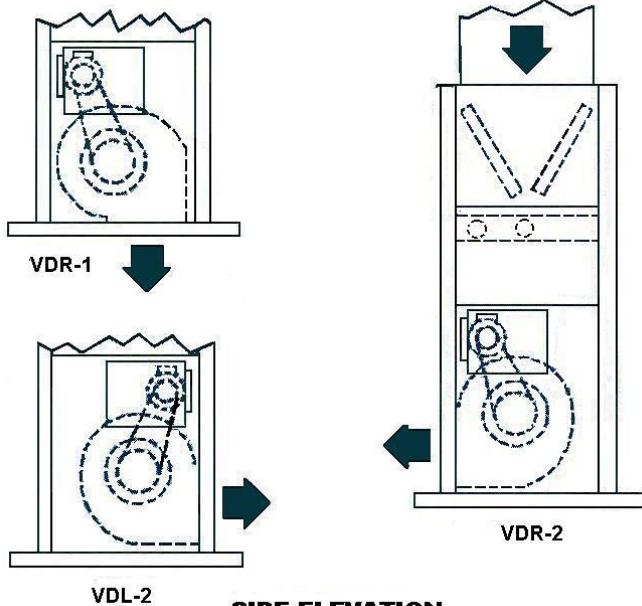

(All sections and components are supported by special base frame and vertical support channels)

* (standard support channel heights 112 thru 218 – 24", 222 thru 233 – 26", 240-48")

VERTICAL UP

VERTICAL DOWN

Capacities: Based on 10 PSIG (at coil) and 0° entering air. For other conditions apply conversion factor. Note: Assume a 20% pressure drop for a two position steam valve and a 50% drop through a modulating steam valve.

Tube wall thickness: .020 – 5 PSI or less (std.) • .025 – 15 PSI or less • .035 – 50 PSI or less • .049 – 100 PSI or less.

Note: Use same approximate shipping weights as comparable size SBS.

Capacities:

Based on 180° entering hot water and 0° entering air. Water flow rates (GPM) shown were determined by selecting water temperature drops and coil circuiting resulting in efficient heat transfer values without excessive pressure drop. Contact your local Hastings sales representative for coil capacities at other conditions.

Standard Equipment Engineers Specifications

Furnish and install the following Hastings evaporative cooling section:

Model Number	CFM	115/60/1 Pump Voltage
---------------------	------------	------------------------------

The evaporative cooler shall have 12" Celdek evaporative media, submersible water pump, schedule 40 P.V.C. water distribution system with splash tube spray over media, cast brass float type fill valve and manual bleed-off valve for constant sediment drainage. Cabinet to be constructed of 18 gauge aluminized steel with painted exterior. Reservoir to be 20 gauge stainless steel.

Options and Accessories

- Automatic drain valve kit.
- Automatic drain valve plus freeze protection kit.
- Insulated transitions to Hastings blower sections.
- 12" Glasdek media UL approved, UL900, Class 2 rating.
- Drift Eliminator. – Recommended at 600 FPM to 699 FPM. – Required above 700 FPM
- Flatbank or V-bank pre-filter section.
- 2" cleanable or extended surface filters.
- Intake louver with birdscreen.
- Step down transformer for either 208 Volt 3 Ph. Or 230/460 V. 3 Ph.
- Matching base rail for use with Hastings blower section.
- U.L. Label Panel

75	365T	–	–	–
100	404T	–	–	–
125	405T	–	–	–

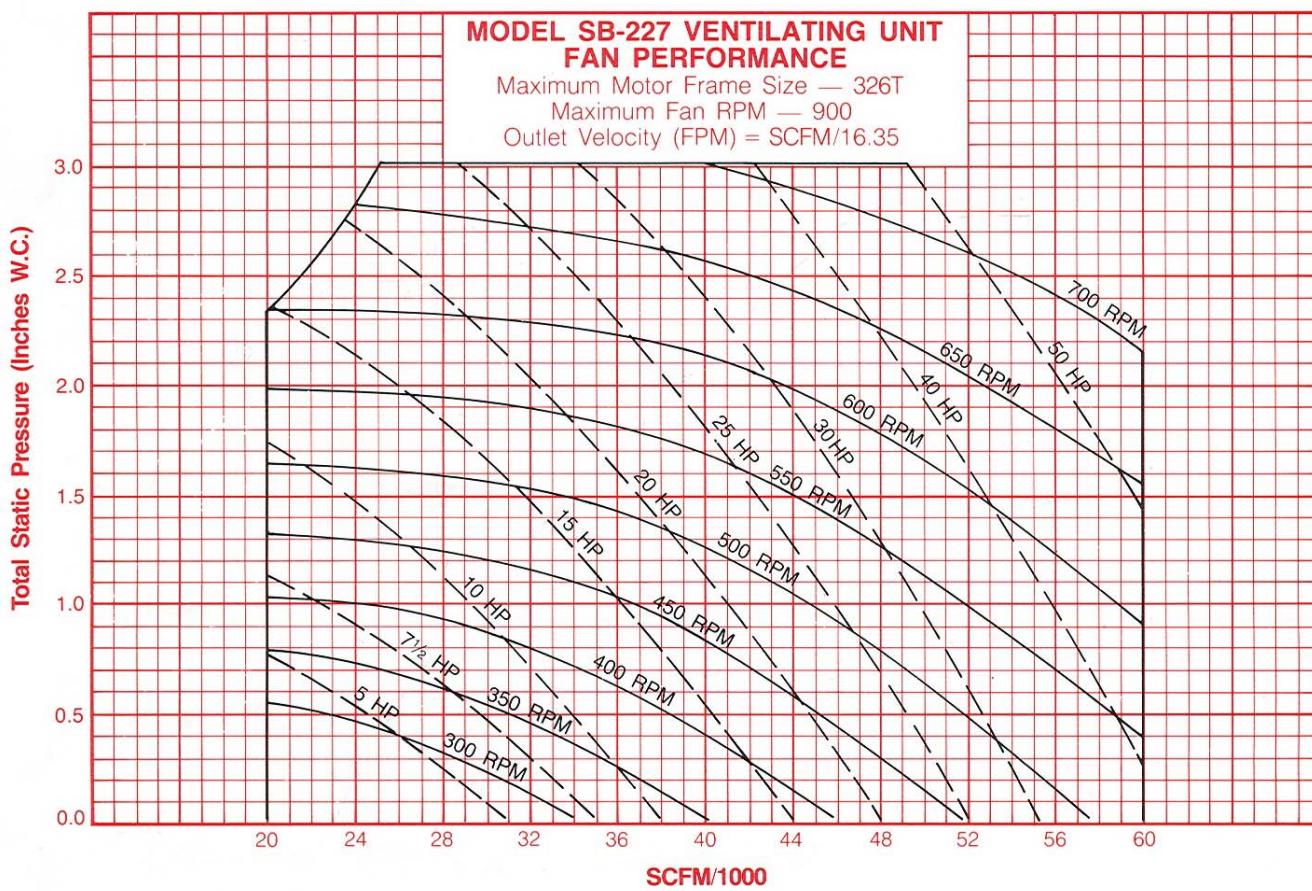

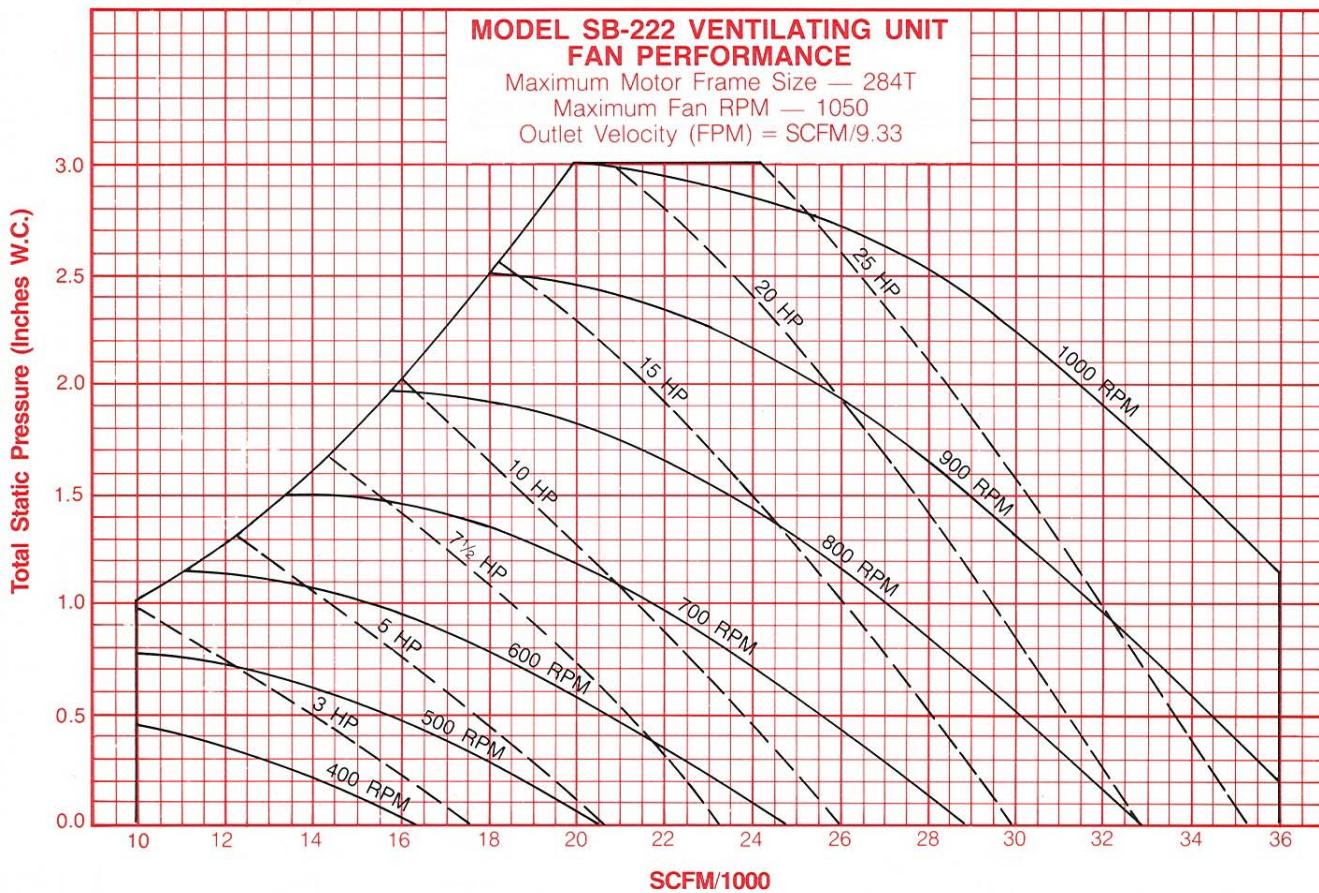

Notes: 1) All motors are three phase.

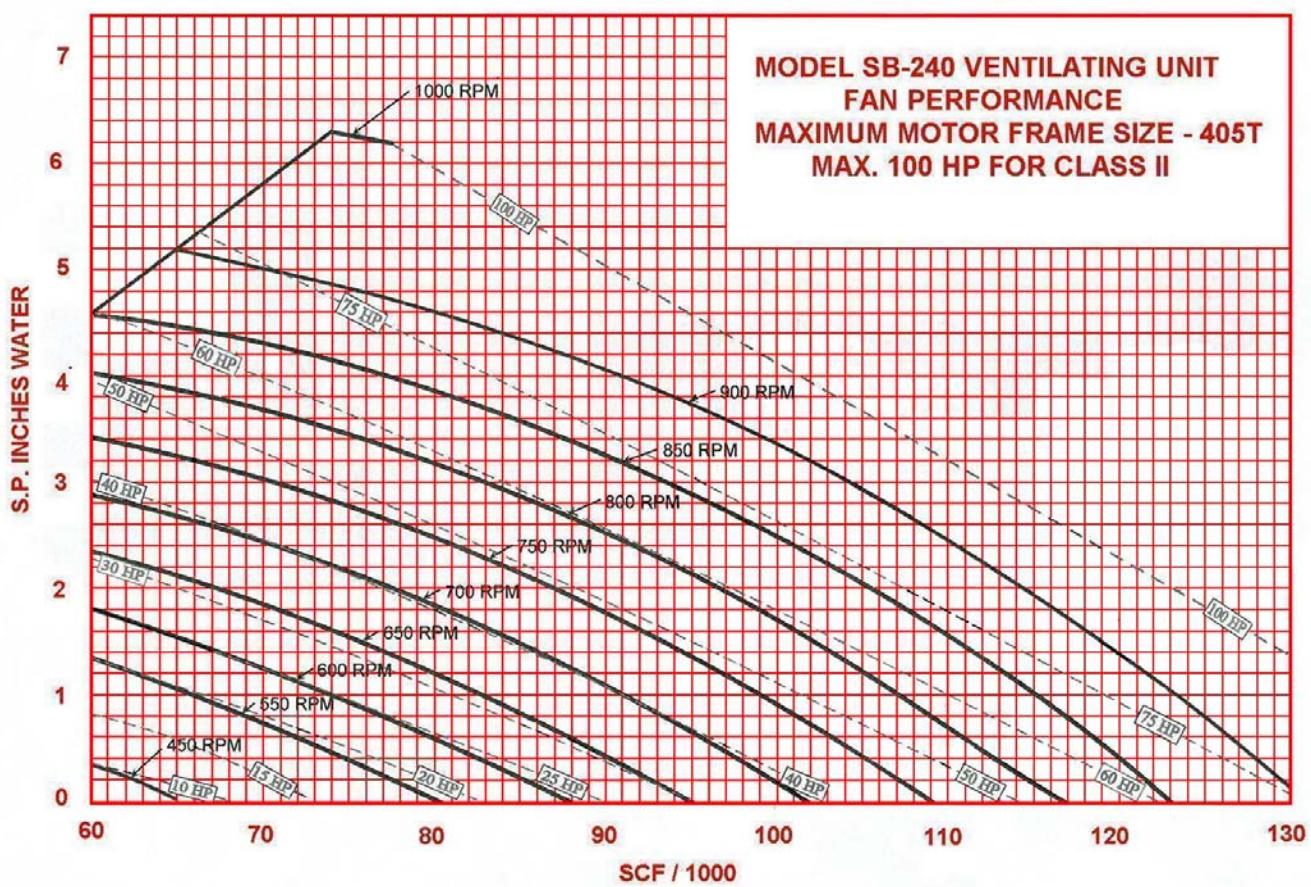

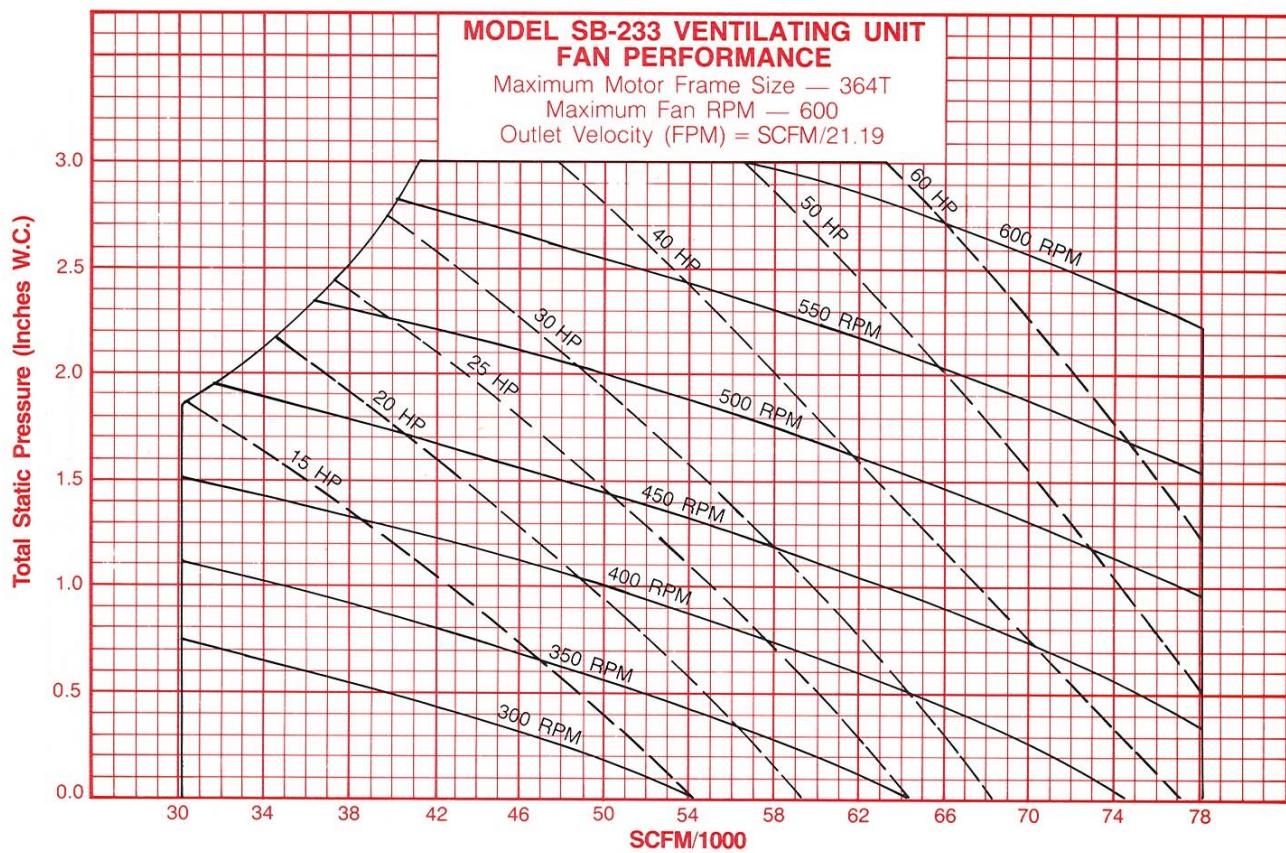

2) Motors less than 1.5 HP have frame sizes that will fit within any SB model ventilating unit cabinet.

3) SB-240 maximum frame size, 405T. For larger frame sizes consult factory.

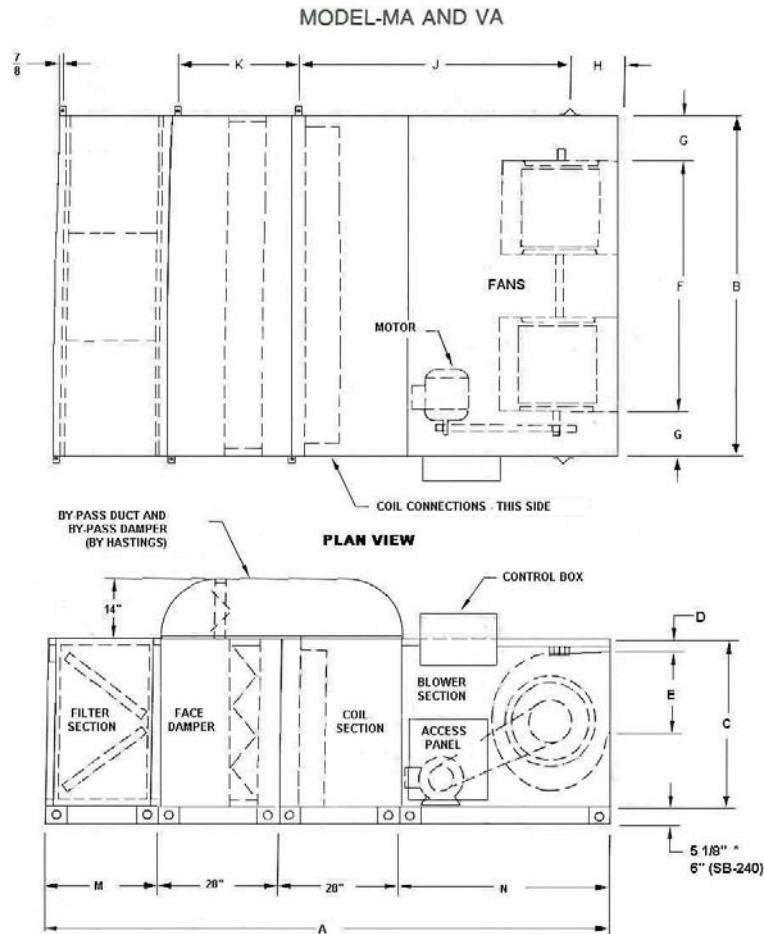

DIMENSIONS

Side Elevation

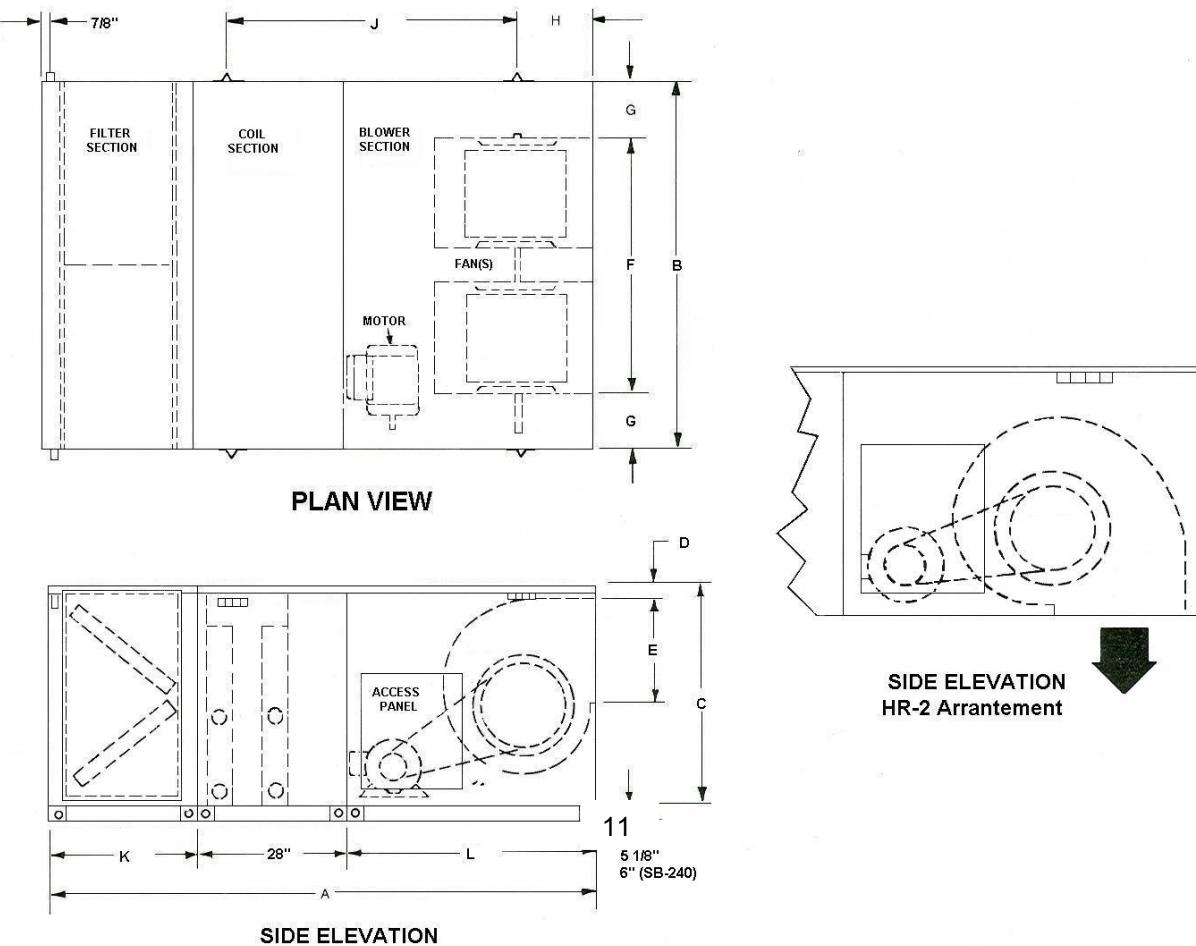

NOTES:

1. SB-112 thru SB-218 have combination lifting and hanging lugs.
 2. SB-222, SB-227, SB-233 and SB-240 have channel base frames with combination lifting and hanging lugs.
 3. Add inlet damper to Model MA.
 4. Add either mixing box or inlet damper to Model VA.
 5. By-pass duct field installed.
- * Base channel on SB-222, SB-227, SB-233 and SB-240 only.

STEAM "SBS" AND HOT WATER "SBW" SYSTEMS

Engineers Specifications

Furnish and install the following Hastings (steam) (hot water) heating system:

Model	SCFM	Total S.P.	Motor HP	Voltage Phase	MBH Output
-------	------	------------	----------	---------------	------------

Entering Air Temp.	Leaving Air Temp.	Steam Pressure	Hot Water GPM	Entering Water Temp.	Leaving Water Temp.
--------------------	-------------------	----------------	---------------	----------------------	---------------------

Blower Section:

- A. Blower wheels shall be statically and dynamically balanced, forwardly curved, double width, double inlet, class 1. (Except SB-240 has Backward Incline fans as standard.)
- B. Blower wheels shall be mounted on a solid turned ground shaft.
- C. 200,000 hour bearings shall be ball bearing, self-aligning, greaseable, pillow-block or flange mounted.
- D. Blower housings, bearings and adjustable motor base shall be mounted on a reinforced frame to insure rigidity and quiet operation.
- E. The driver and driven sheave shall be of the keyed hub type. The driven sheave shall be of a fixed pitch diameter and the driver sheave shall be of a variable pitch diameter through 10 HP and fixed pitch above 10 HP. V-belt drives shall be sized for 135% of motor horsepower.
- F. Cabinet shall be constructed of high quality (18) (16) (14) gauge aluminized steel to insure long rust-free life.
- G. Cabinet interior insulated with 1" – 2# density foil face insulation.
- H. Access panels shall be provided to allow easy access to motors and filters.
- I. Outside surface of cabinet shall be primed with zinc-chromate and finished with a coat of enamel.

Coil Section:

- A. Coils shall be fabricated of heavy gauge copper tubes, staggered on 1 1/2" centers, mechanically bonded to energy efficient plate type aluminum fins. Headers shall be constructed of heavy seamless copper tubing and coil casings of double flanged galvanized steel.
- B. All coils shall be tested leak free at 315 PSIG air pressure under water.
- C. Steam systems shall be furnished with steam distributing coils having free floating cores and pitched in casing to ensure condensate drainage.

Filter Section:

Filter section shall be an integral component of the heating system with "V" or "Z" frames.

Motor:

A Premium Energy Efficient (E+) T-frame, ODP, 1800 RPM prelubricated ball bearing type motor shall be furnished for voltage as scheduled.

Electric Controls:

The following controls shall be furnished:

- Motor starter.
- Control transformer.
- Freeze stat(s).
- NEMA 1 master control panel.
- Remote control station with system switches and indicating lights.

Temperature Control:

The following control sequence and control components shall be furnished with the heating system.

A. Space Heating

- 1. Model HS – Two position space thermostat with two position valve and choice of constant or inter-mittent fan operation.
- 2. Model HO – Modulating space thermostat with modulating valve and constant fan operation.

B. Makeup Air

- 1. Model MA – Single coil having modulating discharge air temperature control of modulating face and by pass damper, two position valve with mild weather air temperature lockout and inlet air shut-off damper.
- 2. Model MB – Double coil having inlet air temperature control of pre-heat coil with two position valve, modulating discharge air temperature control of downstream coil with modulating valve and inlet air shutoff damper.

C. Heating & Ventilating

- 1. Model VA – Single coil having modulating space air temperature and over-riding discharge air temperature control of face and by-pass damper, two position valve with mild weather air temperature lockout and mixed air dampers with manual potentiometer. Inlet air shut-off damper replaces mixing dampers with 100% outside air applications.

2. Model VB – Double coil having inlet air temperature control of preheat coil with two position valve, modulating space air temperature and overriding discharge air temperature control of downstream coil with modulating valve and mixed air dampers with manual potentiometer. Inlet air shut-off damper replaces mixing dampers with 100% outside air applications.

Control valves are shipped by Hastings for field installation in customer's steam or hot water piping manifold. The heating coils furnished with "SBS" or "SBW" systems are subject to damage from freezing. The likelihood of this occurring can be minimized by following the instructions outlined in the installation manual.

Assembly:

The system shall be factory assembled and wired with the exception of controls that are remote to the unit.

Options and Accessories:

The following items are to be furnished: (**Insert desired items from page 4 of this bulletin.**)

In order to maintain our policy of continuous product improvement, we reserve the right to change prices, specification, ratings or dimensions without notice or obligation.
